

## YOUR DEVOPS TOOL OF CHOICE FOR MONITORING TEST RESULTS

IN ONE LOCATION, FOR THE WHOLE TEAM

- Share
- Compare
- Monitor

The larger the code base becomes, the more testing is required before release and the greater the number of test results data. As software development projects grow larger, the number of test results generated can quickly become unmanageable and confusing, creating delays and cost over-runs.

Calliope.pro is a DevOps tool for monitoring test results that allows your team to **share**, **compare**, and **monitor** test results across your entire development team, in one location. Most major testing tools and frameworks that export results as JSON or XML files can be turned into beautiful, intuitive reports. These reports instantly give all stakeholders a glimpse into the health of the project, improving release speed.

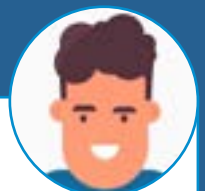

Increase your test automation efficiency and incorporate test results from the entire test automation pyramid in one dashboard, for the whole team.

### Team manager

- Get insight of the project stability
- Easily identify failures
- Supports human-readable scenarios
- Overviews of all projects, in one place
- See if projects are release ready

### Test (automation) engineer

- Create test cases
- Share your test results with team
- Quickly see trends in the results
- Supports major tools and frameworks
- Cross check with automated result

### Developer

- Review and share Unit Test results
- Get details about other test results
- Screenshots incorporated
- Easily identify regressions
- CI/CD integration
