Testing Services

Cybersecurity

Every year the threat of cybercriminals hacking into your systems and applications and doing harm to your customer,s your business, and your reputation increases. Governments are also enforcing stricter regulations.

Our ethical hackers will treat your system as a real hacker would, to identifies vulnerabilities and help you close the gaps in your defences.

Our vulnerability scanning and penetration testing services can help keep your business' and your customer's information safe.

Test Automation

We offer test automation services, consultancy, and training, using Behaviour-Drive Development techniques and the Ruby/Cucumber stack.

Whether you want to get your in-house test automation suite off the ground or want us to take set-up and maintenance off your hands, we'll use our knowledge of the best test automation tools and methodologies to help you create the finest experience for your team and customers.

Calliopepro

We report all test results to your team using Calliope.pro. Calliope is our proprietary DevOps tool for the reporting and monitoring of test results. It allows all stakeholders to **share, compare**, and **monitor** test results across the entire development team, in one powerful dashboard.

Functional Testing

Functional testing ensures that your applications work as expected across multiple devices, browsers, and operating system. It is crucial for ensuring your customer get the experience you've intended for them. These manual, exploratory, and regression tests are a core area of our expertise here at spriteCloud.

We perform these tests for digital agencies, multinational enterprises, and eCommerce sites, amongst others.
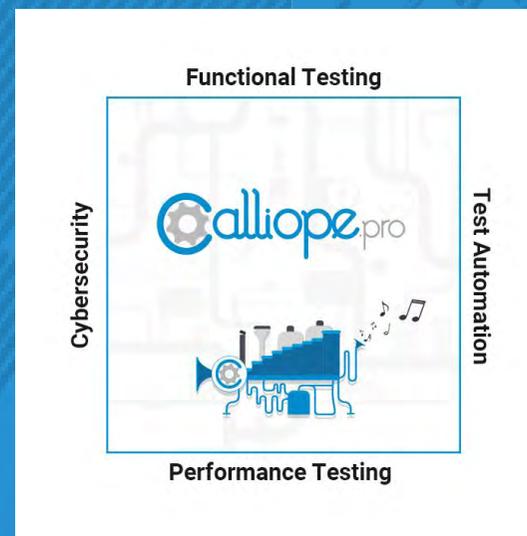

Performance & Load Testing

We provide load testing, stress testing, and performance testing for your website and applications.

We plan, create and execute performance and load tests and analyse results to help you determine the benchmarks and breaking points of your systems. These tests help ensure that when your peak sales season takes off your checkout page doesn't crash, costing you reputation and potentially millions in sales.

Assembling a Monthly Test Stack

Flexibility

Your project's testing requirements are bound to change over time, which is why our subscription services were designed with flexibility in mind. You can tightly focus on testing activities which are needed at different times during your sprint planning using custom schedules.

After the first subscription period of 3 months, we can re-evaluate your Test Stack mix to ensure we have it right-for-you. We have a large pool of commercially experienced test engineers to choose from so we can review and reallocate staff as needed. Our goal is to provide you with one solution at an upfront monthly rate to help ensure that you are getting the most out of our software testing services.

Affordability

Development and quality assurance are often riding the knife-edge of meeting or exceeding their budgets which is why cost-effective testing is so important.

spriteCloud already has a reputation as a high-quality and affordable software testing provider, but our Software Testing Subscription can make testing even more compelling and cost-effective.

Discounts are applied to your monthly subscription fee with every increase in the number of testing services; the number of workdays; and the length of the subscription. The more testing you request, the greater the number of discounts you qualify for on the monthly invoice value

Choose software testing services

Create a custom mix of software testing services below to build an unique testing solution for your organisation and projects. Create a mix from one to four services.

- Functional testing
- Test automation
- Performance and load testing
- Cybersecurity testing

Number of test days per month

With your software testing services mix identified, you can decide how many days of work you require for each testing service, per month.

- 4 days minimum
- Up to 15 days maximum
- Longer? You are better off contracting a test resource to work for you full-time.

Duration of subscription

It takes an average of 3 months to get everything up and running. After the first subscription, you can change your minimum commitment to 1-month at a time.

- 3 months (minimum)
- 6 months
- 9 months
- 12 months

Requirements · Approval · Contact · Assemble · Begin

Contact Our Team

The first step in beginning a Software Testing Subscription is letting us know you are interested.

Discuss Requirements

Our first conversation will be about your project, your goals, and where your pain-points are.

Assemle a Test Stack

Once we understand your requirements, we can build your Test Stack together based on your unique needs.

Get It Approved

Purchase decisions are usually made by several people, including your Finance Manager.

Testing Begins

This is the part we look forward to the most; getting to the work. A Test Manager on our side will be your point of contact.

Expertise

We're experts in software testing who have worked with clients ranging from local digital agencies to world-wide enterprises, in industries ranging from eCommerce to Augmented Reality. That experience translates to your project receiving high-quality testing from our knowledgeable testers.

No more getting Mathijs from reception to test your check-out flow or asking your already busy developers to try to set up, and keep current, a UI test automation suite. When testing experts like us are involved, testing takes less time and is of much higher quality.

Full-service

spriteCloud is capable of being your full-service test solutions provider for most, if not all, of your software testing needs. Our team of test engineers are experienced in many different industries and frameworks, making them perfect for your oganisation.

This means no longer wasting your precious time researching companies, negotiating scopes and budgets, and planning the ramp-up of multiple different testing resources.

spriteCloud brings all the experience, skills and solutions with us, as one organisation, to service your software projects. We will ensure that work activities and budgets are used in the most efficient way possible. Our goal from day one is to achieve the highest levels of customer satisfaction possible.

Use Cases

The job of a **Product Owner** is already complicated enough trying to create an incredible product, balance resources, meet deadlines, and maintain a good project ROI. The last thing they need is a complicated software testing experience.

spriteCloud's Software Testing Subscription simplifies testing so POs can focus the product vision.

A **Test Manager's**, work revolves around ensuring the project's success and the facilitation of quality software testing.

This means they must balance the competing interests of test schedules, matching tester skills with test requirements, and staying within budget. All difficult things to do as the application grows in complexity.

For **Technical Directors** (CTOs), managing multiple technology budgets and timelines, and evaluating every vendor can be time-consuming. spriteCloud's Software Testing Subscription provides organisations with quality testing for the majority of their needs, at affordable prices.

This allows directors the time and mind space to focus on the business.
